Characterisitcs

The G 1690 deliberately focuses on the essential functions of measurement technology for reliable measurement of oxygen concentration in gases. Essential for the reliability and longevity are the sensors used, GOEL 370 and GOEL 381, especially suitable for wet environments.

The instruments also impress with their ergonomics, water protection and display illumination.

Thus, the G 1690 is an inexpensive and precise submersible gas meter, but is also an inexpensive but at the same time high-quality entry for many other oxygen measurements - for example, for protective gas measurements.

Note: The device serves as an additional control. It does not replace a measuring device with approval or safe methods for creating gas mixtures!
