

Pressure-Converter UNICON®-P

Differential pressure - diminished pressure - overpressure - barometric pressure - flow rate

Features

- Measuring range programmable
von -0.300 ... 0.300 mbar bzw. 0 ... 0.300 mbar
bis -1000 ... 1000 mbar bzw. 0 ... 1000 mbar
or 0 ... 2000mbar barometrical pressure
- Measuring function programmable
linear or root extracting
- Measuring unit programmable
e.g. mbar, Pa, hPa, psi, mmW_s
optionally e.g. l/h, m³/h
- Output 4 ... 20mA, 2-wire loop powered
0 ... 10V, 3-wire connection
- LCD-dot matrix display
- 2 electronic alarm outputs (opto coupler)
- Pressure simulation mode
- Protection IP65

Fieldcase
100x100x60 mm (WxD)

General

Pressure converters UNICON-P can be used for measuring low pressure, differential pressure in filter- and clean room technologie In connection with orifice plates, impact (dynamic) pressure, venturi nozzle it is suitable for measurement of flow rates of dry and non aggressive gases. Within the device dependent full scale range, output and display may be adjusted. The device offers' additional features like a unidirectional (e.g. 0 ... 1 mbar) or bidirectional (e.g. -1 ... 1 mbar) pressure range. The analog output depents to the programmed analog output.

Short information

Programming	Parameters are programmed via a front side membrane keypad.
Display	The actual pressure/differential pressure will be displayed in the programmed measuring unit
Option 06 (display conversion)	With option 06, the flow rate can be displayed in a programmable unit as well. Further on the initial part of the transfer characteristic can be linearize or set to "0", to eliminate astable measurement in this part.
Analog output	Proportional to the pressure (linear) or flow rate (root extracting) an analog output signal 4 ... 20mA or 0 ... 10V DC can be generated.
Zero point correction	Reset to zero via front side keypad possible.
Alarm output	Switching performance of the alarm outputs is programmable as minimum or maximum function. The state of the alarm outputs is shown in the LCD-Display.

Programable pressure measuring ranges [mbar]

Device measuring range	1	2	3	4	5	6	9	
unidirectional	min. max.	0 - 0.300 0 - 3.000	0 - 1.00 0 - 10.00	0 - 3.00 0 - 30.00	0 - 10.0 0 - 100.0	0 - 30.0 0 - 300.0	0 - 100 0 - 1000	0 - 200 abs. 0 - 2000 abs.
bidirectional	min. max.	± 0.150 ± 3.000	± 0.50 ± 10.00	± 1.50 ± 30.00	± 5.0 ± 100.0	± 15.0 ± 300.0	± 50 ± 1000	-
max. stat. over-pressure	200	200	300	600	1000	3000	4000	
Burst pressure between process connectors	400	400	600	900	1500	5000	-	
Burst pressure against ambient	600 (3000)	600 (3000)	600 (3000)	900 (3000)	3000	5000	7000	

Values shown in brackets are optional. See order code page 12, point 4

Explanation of over pressure

The maximum static over pressure can be held for a longer time without damaging the device.
 The burst-pressure indicates a limit value which will damage the device in any case, when exceeding.

Max. static over pressure is valid between both process connections and also against the ambient.
 Burst-pressure against ambient means same pressure is applied to both process connections.

Technical data

Power supply

Supply voltage	: 7.5 ... 30 V DC, 2-wire loop powered 4 ... 20 mA 16 ... 30 V DC, 3-wire 0 ... 10 V
Operating temperature	: 0 ... 50 °C
Isolation	: between Analog output/Alarm output1/Alarm output2
Rated voltage	: 500 V DC, between Analog output/Alarm output1/Alarm output 2

CE - conformity

Measuring input

Process connection	: 2 pressure tubes for 4 mm hose (standard), 4 and 6 mm Schott glands available
Measuring medium	: neutral and dry gases in range of 0...50 °C
Measuring principle	: piezoelectric

Rise time

: parameter input filter low=120 ms, med=1400 ms, high=4100ms

Output pressure

Current output	: $4 \dots 20 \text{ mA ext. burden RA } [\Omega] \leq \frac{\text{Supply voltage } - 7.5 \text{ V}}{0.02 \text{ A}}$
----------------	---

Voltage output

: 0 ... 10 V load < 3 mA, supply voltage >16 V
load < 10 mA, supply voltage >20 V

Basic accuracy

: $\pm 0.25\% \pm 1$ Digit, depends on the device measuring range

Temperature coefficient

: < 0.01 %/°C linear and ratio

Zero drift

: < 0.02 %/°C linear or 0.04 %/°C ratio*)

Alarm output

Transistor	: 7.5 ... 30 V DC, max. 60 mA, with short circuit protection
Voltage drop	: < 3 V (at max. load)

Display

Format	: LCD-dot matrix, 3.8 mm high
True value	: 2 lines, 16 characters
	: Standard -9999 ... 9999 Digit
Measuring ratio	: Display conversion -99999 ... 99999 digit (option 06)

Case

: Field case

Material

: case polyamide with fibre-glass PA6-GF/GK 15/15, front foil polyester,

Dimensions

: 100 x 100 x 60 mm (WxHxD)

Weight

: max. 360 g

Electrical connection

: Screw terminal with pressure plate, 2.5 mm² flexible, 4 mm² wire

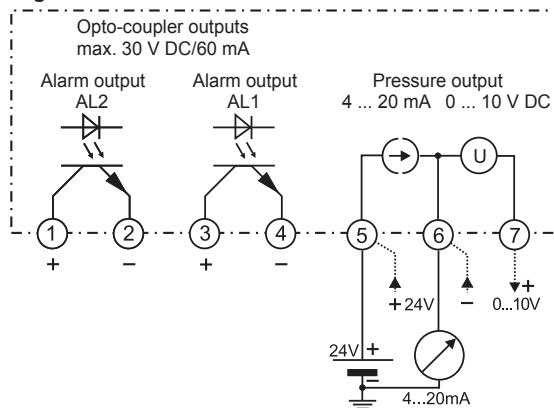

Protection

: IP65, terminals IP20 German BGV A3

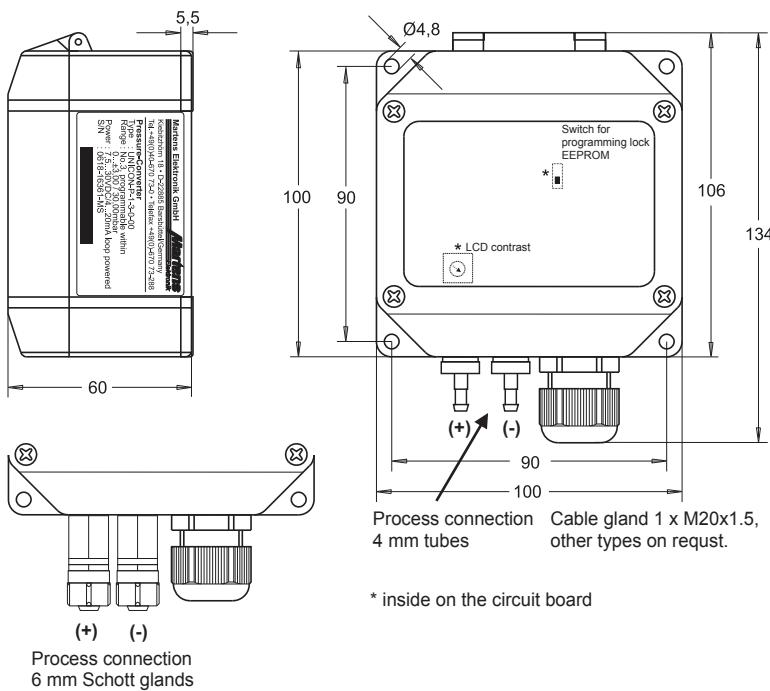

*) ratio

: start of curve linear up to 20% of the measuring range

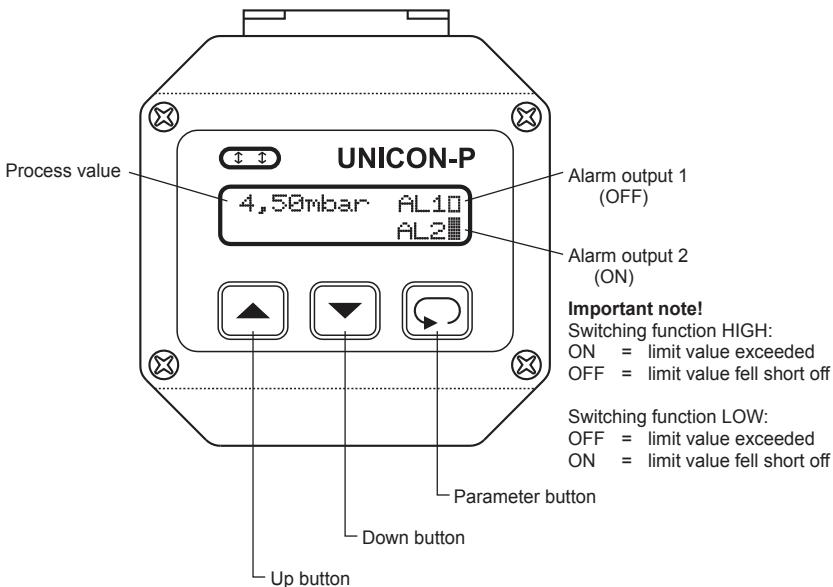

Connection diagram

Note: For supplying the converter use terminals 5 and 6 as shown. If the converter is used for monitoring only, terminals 5 and 6 can be connected directly to supply voltage.

Controls and indicators

Important note!

Switching function HIGH:
ON = limit value exceeded
OFF = limit value fell short off

Switching function LOW:
OFF = limit value exceeded
ON = limit value fell short off

Instructions

Programming of the device is arranged in the **configuration level**.

The desired parameter can be called by button . For selection within a parameter use buttons and .

Button combinations (press buttons at the same time):

+ 1 Parameter back

+ Parameter to "0" or minimum value

When the power supply is switched on, the UNICON initializes itself. The display shows the device type and software version. After initializing, the current measured values are displayed.

The **configuration level** is called-up by pressing the button . Now all the parameters defining the function of the UNICON can be programmed. After pressing the button again, the entered data will be stored.

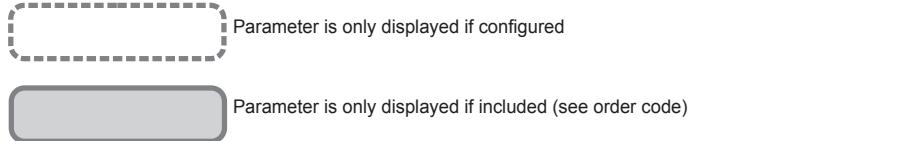

When the configuration is finished, or when no button is pressed for more than 90 seconds, the program jumps back to the working level. Leaving the **configuration level** is possible at any time when pushing the button for 2 seconds.

Installation note:

After installation, the device must be configurated for the intended use. See page 6.

Programming

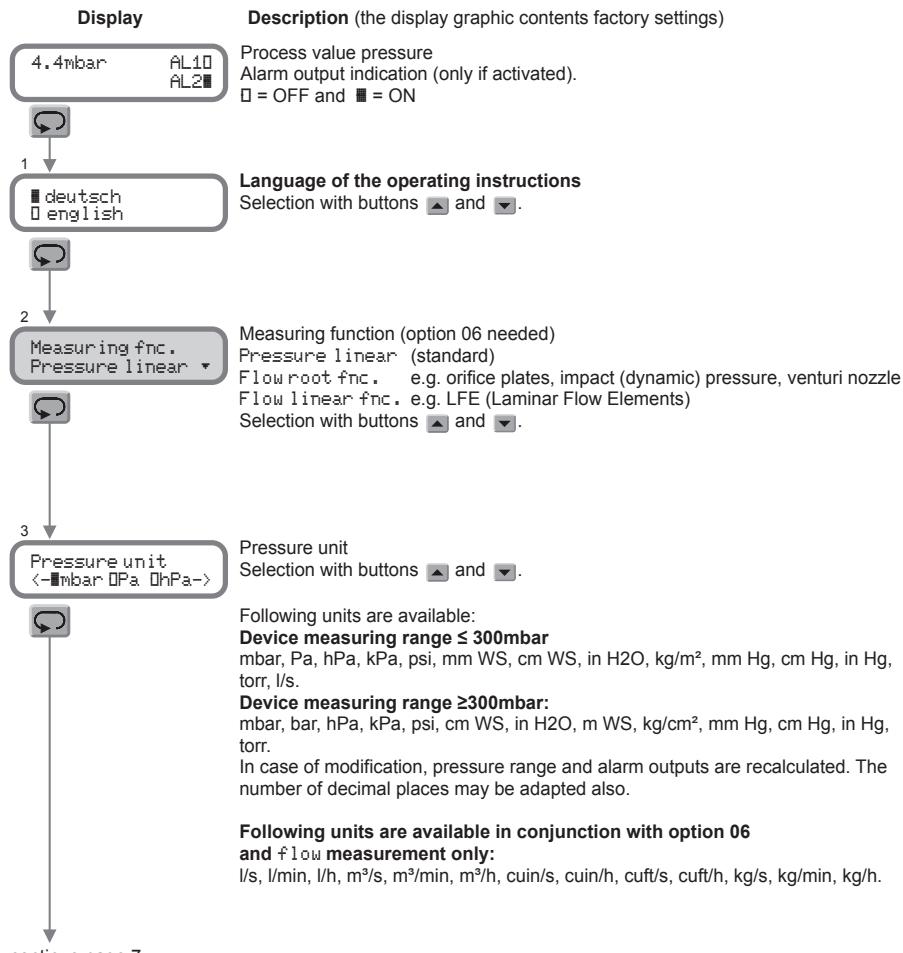

Notes to representation

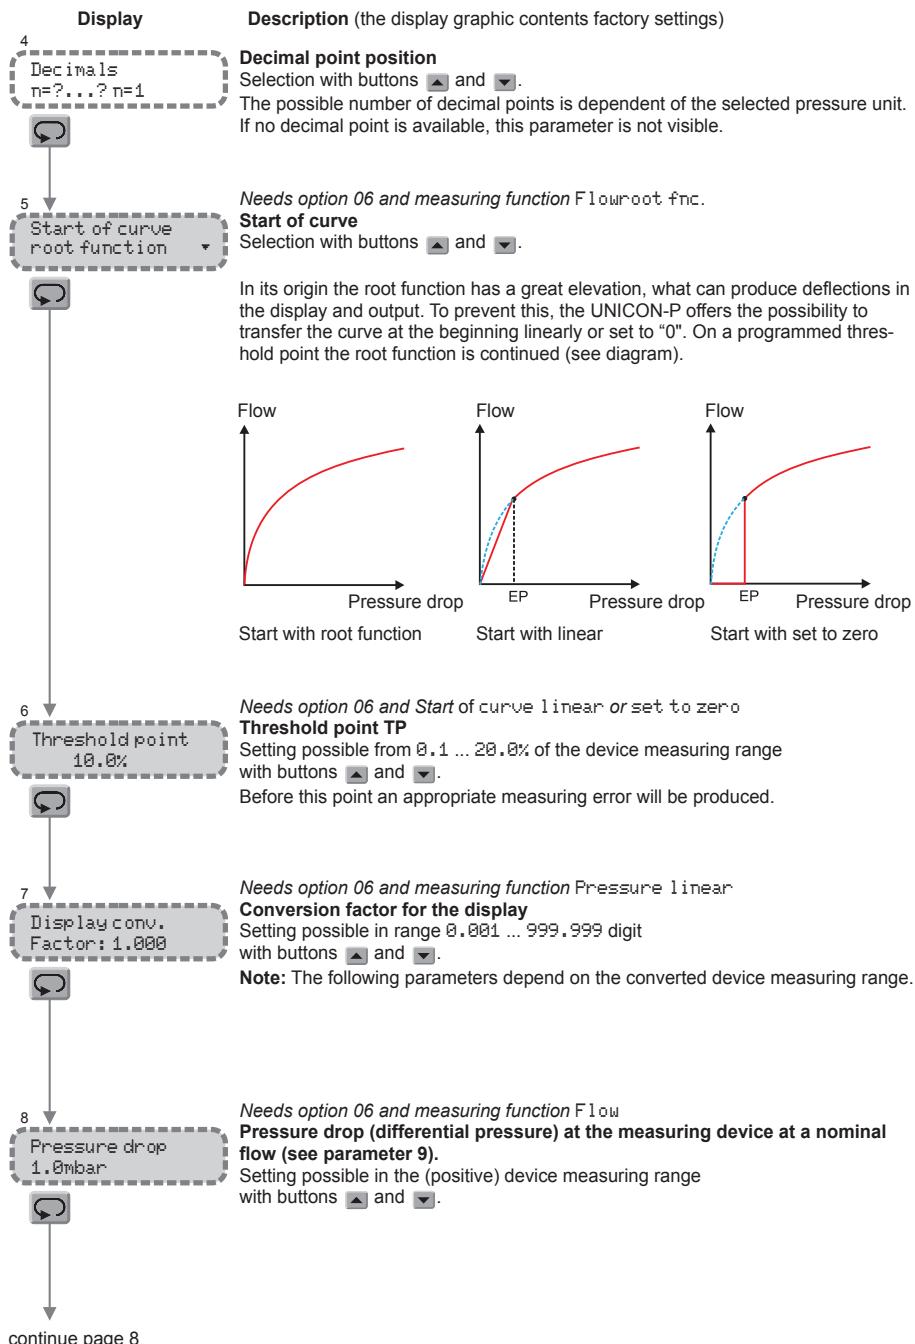

Note!

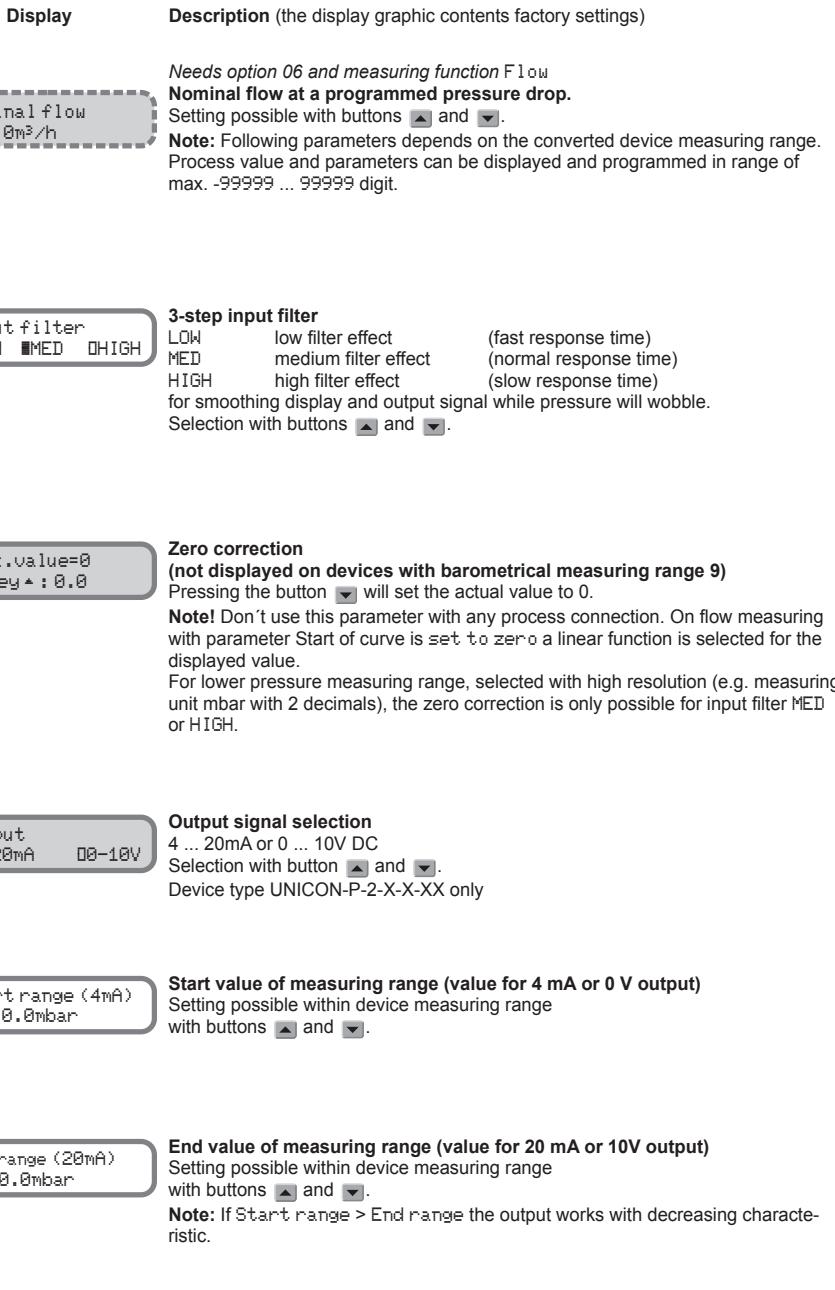

During the configuration only those parameters will be displayed, which are not excluded by other parameter settings. If parameter length exceeds 16 characters, the remainder is available by pushing buttons and .

Error codes

Display	Description and remedy
Display flashes	OVERRANGE of the measuring range
Write protect!!	A changed parameter setting can not be stored, because the write protection is activated by internal slide switch at position "on". Set the switch at position "off" and modify settings again.
Parameter error ->Please check	While examination of parameter memory XX, errors were detected. Quit display message with button and check parameter settings. If the errors occurs again, a factory check is necessary.
Range <X Correct with \$>	The minimal range (X) according to the device measuring range fall below while configuration. Check and change measuring range (see parameter 15).

Programming examples

No. Parameter : Parameter values

Absolute pressure measuring

Device measuring range 2000 mbar/hPa abs.
800 ... 1200 hPa is corresponding with the output signal 4...20mA

```
3   Display unit      : hPa
10  Input filter     : MED
14  Start range (4mA) : 800
15  End range (20mA) : 1200
```

Flow rate measuring with Impact-pressure sensor (needs option 06)

Pressure drop 1.6 mbar at 200m³/h volume flow
Maximum flow 250m³/h is corresponding with the output signal.
Device measuring range 3mbar

```
2   Measuring func.   : Flow rate rad.
3   Display unit      : m³/h
4   Decimals          : 1
5   Start of curve    : linear
6   Threshold point   : 10.0%
8   Pressure drop     : 1.60mbar
9   Nominal flow      : 200.0m³/h
10  Input filter      : MED
11  Proc. value = 0   : Controlling is necessary at pressure-less system or open process inputs.
                         If necessary set to "0.000".
14  Start range (4mA) : 0.0m³/h
15  End range (20mA) : 250.0m
```

Ordering code

UNICON-P - **1.** - **2.** - **3.** - **4.**

1. Type

- 1 Output 4...20 mA,
2 electronic alarm outputs,
supply voltage 7,5 ... 30 V DC, loop powered

- 2 same as 1, with additional output 0 ... 10V DC selectable,
supply voltage 16 ... 30 V DC, 3-wire connection

2. Device measuring range [mbar]*

- 1 3 rel.
2 10 rel.
3 30 rel.
4 100 rel.
5 300 rel.
6 1000 rel.
9 2000 abs. (barometrical pressure)

3. Process connection

- 0 4 mm tubes (standard)
2 4 mm Schott glands
3 6 mm Schott glands

4. Options

- 00 without option
06 Display conversion (e.g. flow rate)
11 Extended burst pressure (max. 3000 mbar) for measuring ranges 1 ... 4

*The required pressure range is programmable down to 10 % of full scale within the selected device measuring range. Please consider that measuring error is increased with amplification.

Example:

Device measuring range 3	→ 30 mbar
programmed pressure range	→ 0 ... 10 mbar
Amplification [V]	→ 3x
Measuring error V x accuracy	→ = 3 x 0.25 % = 0.75 %

Variation of temperature while operating will produce additional temperature errors (see technical data).
